PROFESSIONAL SUMMARY

Full-stack engineer experienced in building data-intensive web applications, designing scalable RESTful APIs, and owning end-to-end feature delivery from React frontends to cloud-deployed backend services. Polyglot (TypeScript, Python, C#) with a track record of engineering high-throughput data pipelines processing 10,000+ daily events at 40% faster throughput. Product-driven builder who combines strong backend fundamentals with modern frontend frameworks and cloud infrastructure (AWS, Docker, Kubernetes). Seeking to apply systems thinking to data and analytics infrastructure at scale.

CORE COMPETENCIES

TypeScript / JavaScript / Python

React / Node.js

RESTful API Design

Data Pipelines & Analytics

PostgreSQL / MongoDB / DynamoDB

Docker / Kubernetes / CI/CD

AWS Cloud Infrastructure

End-to-End Product Delivery

WORK EXPERIENCE

Tech Verse Solutions

Jun 2024 - Dec 2024

Software Engineer Intern

India

- Architected distributed microservices delivering real-time analytics for 50,000+ monthly users, maintaining high availability through async service communication and DynamoDB-backed NoSQL storage
- Engineered scalable RESTful APIs using Python and Node.js, optimizing backend logic to reduce average system latency by 25%
- Designed cost-efficient batch processing data pipelines on AWS (EC2, S3, DynamoDB), reducing compute costs by 18% while processing 10,000+ daily events with zero timeouts

Coinmint

Jun 2022 - Jul 2023

Fullstack Developer

India (Remote)

- Engineered robust backend APIs and optimized server-side data retrieval, building responsive React UIs connected to complex backend architectures
- Integrated critical third-party services through cross-functional collaboration with product and QA teams, securing database-to-client data flows under strict security protocols
- Accelerated development speed by 20% by building dynamic user interfaces with React connected to backend APIs

SpotLine

Dec 2021 - Sep 2022

Fullstack Developer

USA (Remote)

- Directed end-to-end development of 5+ high-traffic web applications, driving a 20% increase in user engagement through modern framework adoption
- Executed complete redesigns for 10+ websites, improving system performance by 25% and mobile responsiveness by 30%
- Conducted deep-dive performance tuning on Core Web Vitals, reducing initial page load times by 30% across multiple client platforms

PROJECTS

High-Throughput Analytics Platform

Engineered a scalable data pipeline processing 10,000+ daily API events with zero timeouts, operating 40% faster than legacy systems. Designed for real-time analytics ingestion.

Node.js, AWS, Data Pipelines, NoSQL

Machine Learning Predictive Pipeline

Developed an automated ML workflow supporting 10,000+ daily predictions, reducing overall model evaluation time by 40%.

Python, ML Pipelines, Automation, Batch Processing

Scalable E-Commerce Architecture

Architected a high-availability e-commerce platform driving a 30% increase in user conversion rates by reducing checkout latency by 30%.

React, Node.js, Microservices, AWS

EDUCATION

Bachelor of Computer Science - University of Windsor

SKILLS

Backend: Node.js, Python, C# (.NET Core), TypeScript, RESTful APIs, Microservices

Frontend: React, JavaScript (ES6+), TypeScript, HTML5, CSS3

Cloud & DevOps: AWS (EC2, S3, DynamoDB), Docker, Kubernetes, CI/CD, Git Databases: PostgreSQL, MongoDB, SQL, NoSQL

Core: System Design, Data Pipelines, Agile/Scrum, Product-Driven Development
